Everyone has by now heard about the **Smart Package** technology we're looking into. Here's how it works. Small chips are attached to retail consumer product packaging. When a consumer picks up, say, a tube of toothpaste, a signal is sent to the store shelf, which contains printed circuit boards. (If the consumer puts it back on the shelf, that's recorded too). All transactions are sent to an in-store computer and then batch uploaded to our data center every hour.

The per-unit cost of goods of such a system aren't quite where we want it to be, yet, but with **Moore's Law** being what it is, we should get there within three years. Now's the time to start some field tests, so that we're ready to roll Smart Packages out broadly by 2004.

Title: Method, Apparatus, and Manufacture
for Facilitating a Self-Organizing Workforce

Retailers are missing 10-20% of sales because of inventory management problems

Post Credit = 21.88 % | Votes = 4

Sandra U. submitted Wednesday, 10/10/07 PM

Manufacturers and retailers both expend a lot of effort trying to get the right products to the right place at the right time. However, according to our own analysis, even the retailers who do the best job managing their inventory lose about 11% of sales because an item is not on the shelf when a consumer goes to look for it. I've attached a pivot table that shows the magnitude of the problem for each of our North

The problem is even worse on the weekends!

Facts | Post Credit = 3.13 % | Votes = 4

Anonymous Poster submitted Wednesday, May 09, 2001 10:56:14 PM

Yes, and this problem is even worse on the weekends, when shoppers are emptying store shelves and the delivery trucks aren't arriving with fresh supplies.

Potato chips are the only chips we've ever gonna see on retail shelves

Challenges | Post Credit = 0.00 % | Votes = 3

Luzp Z. submitted Thursday, May 10, 2001 11:01:08 AM

Guys, this just isn't going to work. It's not even worth trying! It's just another solution looking for a problem...from those propeller heads in the Supply Chain group. I've been working with retail for 30 years now, and I should know, nobody's going to swallow this program.

We have a retailer in Atlanta who wants to pilot this technology

Smart Package technology could cut our inventory in half

Benefits | Post Credit = 29.41 % | Votes = 4

As you know, we're carrying \$2.5 billion in inventory at any given time, with a 60 day turnover. With more accurate, real-time forecasting, we could cut the turnover time in half, freeing up \$1.25 billion in additional capital for the company. This is very strong support of our "Lean and Mean 2002" global supply chain initiative.

Subject: It currently takes four days to collect barcode scanner data

Message: Today, we have to wait four days to get data collected from retailers' bar code scanners. That's still way ahead of smaller manufacturers who typically have a 20-30 day delay.
